

recoiril

DESIGN LINE

The RECacril® and RECAsystem canvases are treated with a special technological process to ensure the lasting quality of the fabric. In this process nanoparticles completely cover the surface of the fibers in the fabric, forming a permanent coat. After treatment, both the surface and the inside of the fabric are permanently protected against dirt build-up, and adverse effects of a wide variety of atmospheric agents. The low reactivity and high stability of the infinity treatment endows long-term protection to the fabric, especially against mildew, and provides excellent water and oil repellency.
